

Main Sequence Fitting

Paul McSarrow, Brandon Rodriguez,
Zachary Hauck, & Teddy Brewer

TABLE OF CONTENTS

01

TOPIC

What is our topic & why are we interested in this topic?

02

DATA

Where did we get & how did we prepare our data?

03

ANALYSIS PROCESS

How we analyzed our data

04

CONCLUSIONS

What did we conclude from our analysis

05

HURDLES

What problems did we encounter and how would we do the problem differently

01

TOPIC

A CLOSER LOOK

MS - Fitting

Determining distance
to stellar clusters
using Main Sequence
Fitting

HR Diagram

Analyzing the
distribution of stars in
an HR diagram

Comparison

Comparing observed data
from the cluster with
theoretical models and
adjusting distances until
the main sequence aligns
with known models

02

DATA

WHERE WE GOT OUR DATA

GAIA ARCHIVES

- Map of the Milky Way
- Variety of parameters to choose from
- Easy to find clusters

ABOUT MESSIER OBJECTS

Catalogued by the French astronomer
Charles Messier

- Almost all Messier objects among the closest to Earth in their respective classes
- Consists of a diverse range of astronomical objects
 - Star clusters, nebulae, galaxies, etc.

DATA CLEANING/PREP

Position File

☒ Name
☐ Equatorial

Target in ☒ Circle ☐ Box

Name

Radius 5 arc sec

Search in: gaiaedr3.gaia_source

Extra conditions

Display columns

<input type="checkbox"/> solution_id	<input type="checkbox"/> designation	<input type="checkbox"/> source_id	<input type="checkbox"/> random_index	<input type="checkbox"/> ref_epoch
<input type="checkbox"/> ra	<input type="checkbox"/> ra_error	<input type="checkbox"/> dec	<input type="checkbox"/> dec_error	<input checked="" type="checkbox"/> parallax

Using Gaia Archives

- Easy to remove or select desired columns
- Include specific conditions

No data cleaning needed

- ☒ parallax
- ☐ pmra_error
- ☐ ra_pmra_corr
- ☐ parallax_pmra_corr
- ☐ astrometric_n_good_obs_al
- ☐ astrometric_excess_noise_sig
- ☐ pseudocolour_error
- ☐ pmdec_pseudocolour_corr
- ☐ new_matched_transits
- ☐ ipd_frac_odd_win
- ☐ scan_direction_strength_k4
- ☐ duplicated_source
- ☐ phot_g_mean_mag
- ☒ phot_bp_mean_mag
- ☒ phot_rp_mean_mag
- ☒ phot_rp_n_blended_transits
- ☐ radial_velocity
- ☐ rv_visibility_periods_used
- ☐ rv_amplitude_robust
- ☐ vbroad
- ☐ grvs_mag_nb_transits
- ☐ ecl_lon
- ☐ has_xp_continuous
- ☐ has_mcmc_gspphot
- ☐ classprob_dsc_combmod_star
- ☐ logg_gspphot_lower
- ☒ distance_gspphot
- ☐ azero_gspphot_upper

03

ANALYSIS PROCESS

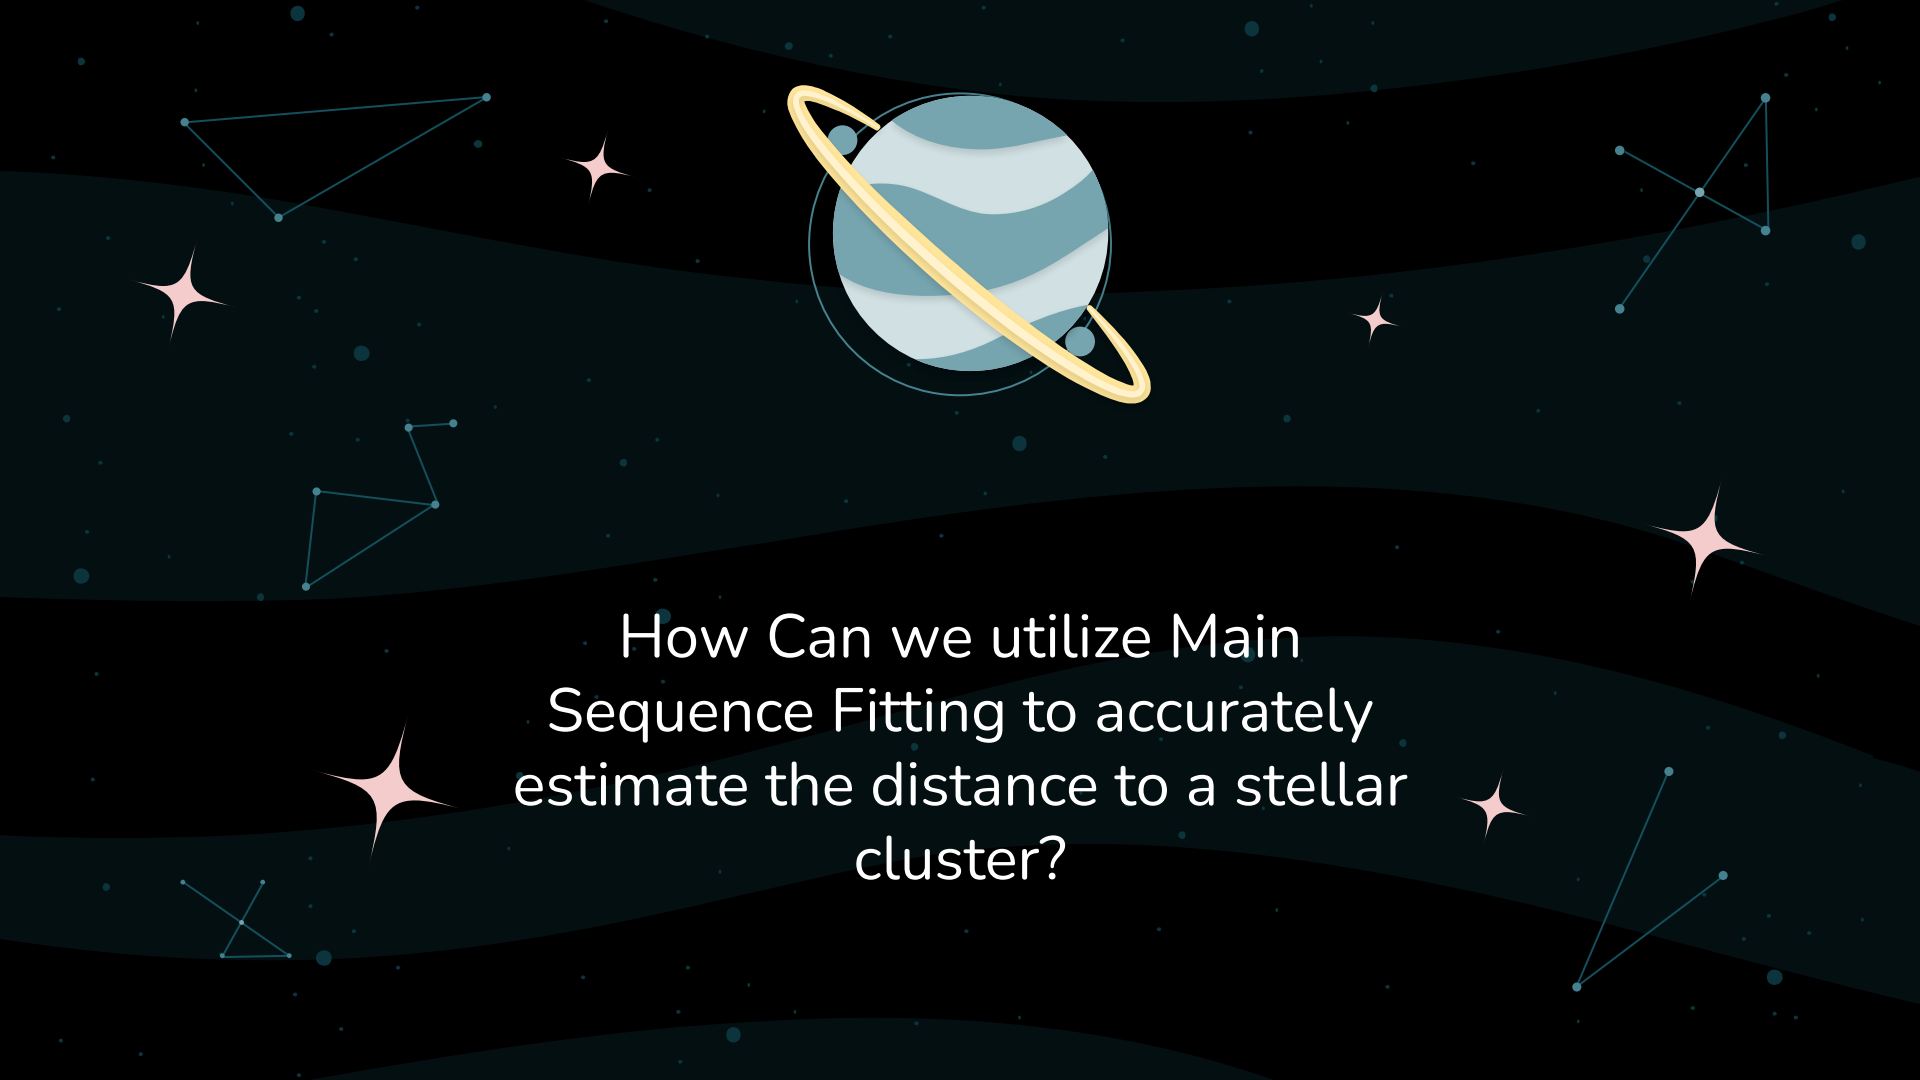

The HR Diagram

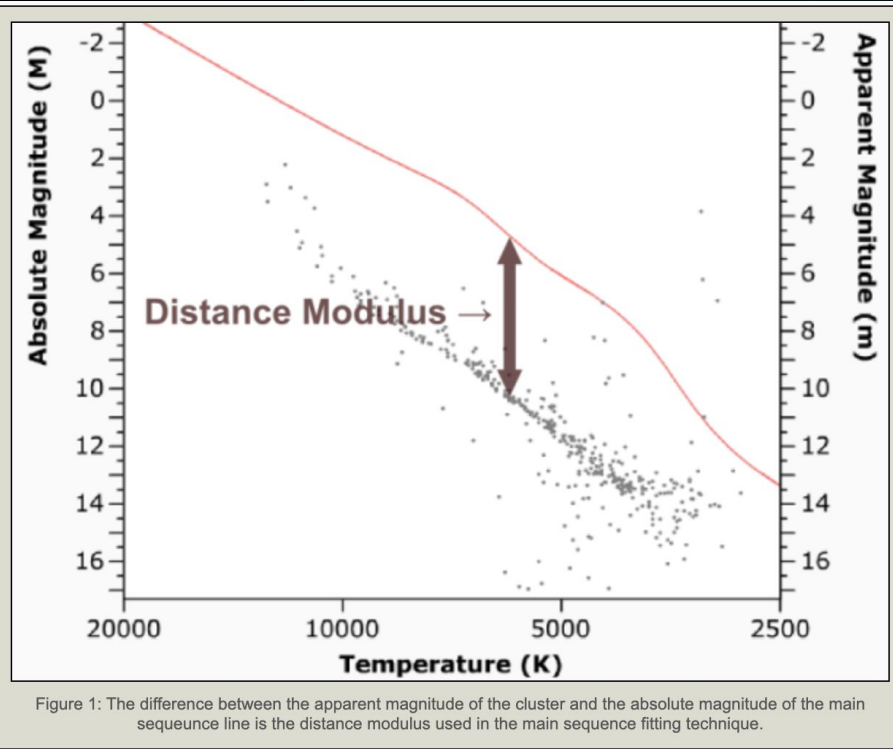

Why utilize clusters?

How Can we utilize Main
Sequence Fitting to accurately
estimate the distance to a stellar
cluster?

Any difference in position between the main sequences must be due to the distance of the cluster

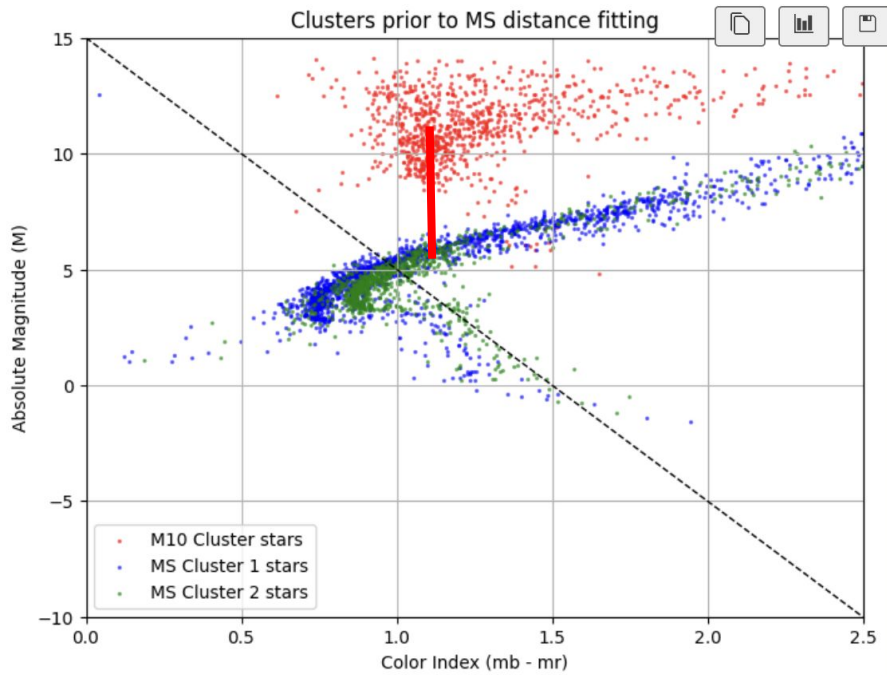

Problems with MS Fitting

1. Main Sequence Evolution
2. Mass Transfer from Companions
3. Non-Member Inclusions

04

CONCLUSIONS

05

HURDLES

HURDLES

PREVIOUS

- Project idea wouldn't work
- Previous data set had too many N/A
- Limited time

Calculations

Could not find reliable method to get temperature

TIME

We ran out of time

MGMR/MB

Struggled to get MGMR/MB from dataset
